Solar spot light requires a solar panel to operate (ADD 5 metre extension lead \$20 each)

(2WATTSPOT2)

(2WATTSPOT4)

## SOLAR information

How to get the best out of your solar system

## Operation Instructions

### For units with Lithium Battery

#### INSTALLATION

The box containing the light string's solar panel MUST be installed in a well-lit location where it can receive maximum sunlight during daytime hours. Any cover that shades the panel will affect its ability to absorb sunlight and decrease the amount of brightness and duration of the LED lights. The lights and solar panel box are all weather – they should not be affected by exposure to rain, snow or temperature.

Your solar light panel has a light sensor, so it will activate automatically at sunset and deactivate automatically at dawn. Its location should NOT be near a light source such as a porch light, street lamp, etc., as these lights might prevent the lights from automatically turning on. If possible, place the solar panel facing north to ensure the solar panel absorbs maximum sunlight. The string of lights can be hung on tree branches, bushes, a roof, eave, fence or any other place you wish.

At least 6 hours of exposure to light is required to illuminate the light strand. The lights will illuminate for 6 - 8 hours if the solar panel is charged in optimal lighting conditions. Although your solar panel will continue to collect energy on cloudy, rainy or snowy days, the amount of energy collected will limit the time your lights illuminate. For example, a bright cloudy day will provide 3 -4 hours of illumination and a rainy or snowy day will provide up 1-2 hours of illumination.

#### BATTERY

The Lithium Battery included with this product is rechargeable and is generally good for up to 500 charges

## Specification for 2 & 4 watt solar panels

### Features

- High efficient poly crystalline panel
- Glass front panel
- Longer light output
- Detachable light strings with two outlets on panel
- Great performance even on a cloudy day
- Photo sensor control auto ON / OFF
- Environment friendly use the energy from the sun
- Easy installation
- Free of maintenance
- Charge 1.5 hours for every 1 hour of night use
- Easy to replace batteries 3 x AA rechargeable

### Specifications

Runtime : up to 8 hours  
 Solar cell : Ultra high efficiency poly crystal  
 Solar panel : 2 watt glass front panel w two outlets  
 Capacity : 2 x 100 piece LED 10M light strings  
 Light string : detachable 100 pces led on UV Stabilised PVC cable 1.6 mill with Dim connectors  
 LED type : pure white or warm white  
 Battery : Replaceable 3 piece 1300mAh Ni MH AA batteries
